

5129F2 SET UP INSTRUCTIONS

- 1) Prepare a suitable location for your new fountain. The fountain should set on a firm and level pad.
- 2) Always follow local electrical codes, making sure to connect to a safe GFCI circuit.
- 3) Place Pump inside 6129H bowl unit. Insert Pump Cord through the hole in the floor of the bowl. About 10" from pump, push Larger Stopper around pump cord. Then push stopper into place in the bowl floor.
- 4) Insert the Exhaust Adapter into the top of the Pump (if not already attached).
- 5) Push the two tubes onto the barbed Adapter.
- 6) Slip the Restrictor onto the center of the smaller tube. Tighten the Restrictor just enough to hold it in place.
- 7) Push the open end of the smaller tube onto the pump exhaust adapter.
- 8) Place the 5129H top into position within the bowl. As you lower it into place, push the open end of the larger tube up through the bottom of the 5129H top.
- 9) Once the top is set, place the Small Stopper around the end of the larger tube which is now inside the 5129H top. Then push the stopper tight in the bottom of the 5129H.
- 10) Fill the bowl to about 1" from the top.
- 11) Read your pump instructions. Then, plug in the pump and enjoy your fountain. If the pump does not immediately begin working, there may be an "airlock" within the impeller chamber. Simply unplug and plug in a few times and it should start.

IMPORTANT – WINTER CARE

Winter ice build-up can cause damage to concrete statuary. Follow these tips to reduce winter weathering to your fountain:

- * Disconnect power to pumps and lights.
- * Remove plugs / stoppers in all fountain bowls to open drains and let all moisture out. Keep drains open throughout winter.
- * Place an absorbant material like burlap, blankets, etc. inside vases/bowls and cover all with a Henri fountain cover.
- * Do not allow snow or ice to build up on or against the concrete. Remove snow before it turns to ice. Do not use salt or chemical ice removers as these may damage concrete.

By following these simple and sensible precautions during the winter season, you will protect your fountain for years of beauty and enjoyment.
