

SOLAR HANGING ORB

Please read this manual carefully before use and keep it for future reference.

Clean the solar panel from time to time

Do **NOT** place in shaded areas

Do **NOT** charge the solar panel behind glass

HOW SOLAR LIGHTS WORK

During the day, the solar panel converts solar energy into electricity and stores it in the rechargeable battery. At night, the light turns on automatically via a light detecting sensor built into the unit. How long the light illuminates will depend upon the location of the light, weather conditions, and how much direct sunlight the unit is exposed to.

Ensure the power is switched to 'ON' while charging.

CHOOSING THE RIGHT LOCATION

- Select an outdoor location where the solar panel will receive at least 6-8 hours of full, direct sunshine each day. Ensure tree, shrub or building shadows are not shading the solar panel throughout the day as this will influence the charge of the battery and shorten the working time at night.
- Avoid locations with strong nighttime light sources nearby, such as street or porch lights, as it may cause the light to turn off due to the light detecting sensor receiving too much ambient light.

OPERATION

1. Turn the power on the solar panel 'ON'.
2. Place the solar hanging orb in a location that will receive 6-8 hours of full, direct sunlight each day.
3. First Time Use: The solar light will require at least 8 hours of full and direct sunlight to charge the battery fully. Make sure the unit is turned 'ON' while charging.

CLEANING

Gently wipe down the entire unit with a soft, damp cloth. Do not put pressure on the solar panel while wiping down the unit as this may damage the panel.

⚠ IMPORTANT INFORMATION ⚠

USE & CARE

- Designed for outdoor use only.
- Keep the solar panel clean by wiping it down with a damp cloth. Clean solar panels will absorb more sunlight.
- Never use chemicals or abrasive materials to clean the unit.
- Store indoors during freezing weather. Remember to turn the unit off before storing.

TROUBLESHOOTING

- Ensure the power button is in the 'ON' position.
- This product was designed to only work at night, make sure the solar panel light sensor is not receiving too much ambient light.
- If the light only works for a short period of time, attempt a 'Boost Charge':
 - Turn the power 'ON' and let it charge in full, direct sunlight for at least 8 hours.
 - Turn the power 'OFF' at night to conserve the battery.
 - Repeat this process for 2-3 days. If the unit still does not work, the battery may need replacing.

This product uses a rechargeable battery. When the battery can no longer be used, it should be removed from the unit and recycled. The battery must not be incinerated or composted. Recycle the battery in accordance with local laws and regulations.

Any modification or failure to follow the recommended care will void the product warranty.
